

SUBJECT: F35 Voltage Maintainer

We are glad to inform you that the new accessory **F35** is now available for sale.

F35 is the new professional **voltage maintainer** with intelligent programming. It is suitable for any workshop, especially for ECU programming and ADAS calibration functions.

Integrated functions:

- **Showroom Mode:** the charger will supply the vehicle with all the energy it needs while it is switched on in demo mode. Thanks to its compact size, the charger can be hidden under the vehicle and out of sight.
- **Charge Mode:** it is used to charge and recondition batteries of any type and size. During charging, the charging current and percentage are displayed on the screen.
- **Test Mode:** the device can test both the battery and the starter system of a vehicle. Both tests can help to quickly identify any problems without requiring any additional equipment.
- **Diagnosis Mode:** the output voltage of battery chargers can be selected according to the manufacturer's requirements in order to keep voltage constant during programming operations.

Technical Data:

12/24V Intelligent Programming Charger F35

- Input voltage: 200-240V AC
- Max. charging current: 24V-17.5A / 12V-35A
- Frequency: 50/60Hz
- Cable length: 3m
- Charging voltage: 12/24V

Code for orders:

8-62100177 - F35 Flash Charger
