

SUBJECT: StepLine - New versions with Vario Speed

We are pleased to inform you about following new additions to **StepLine** range.

As of **March 2025**, the new versions with **Vario Speed** gearmotor are available on the price lists.

The new **Vario Speed** system uses **Brushless** technology and allows the wheel rotation speed to be adjusted from **0 to 13 rpm** (220V version).

By pressing the pedal dedicated to wheel rotation, the operator can easily manage the correct working speed. The rotation speed increases as the pressure on the pedal increases

These new versions are available in 2 different motor options:

- 200V-240V/1Ph /50/60Hz - 0.85 kW
- 100V-130V/1Ph /50/60Hz - 0.6 kW

Benefits of Brushless Technology:

- Compact size
- Less maintenance due to the absence of the belt and pulleys.
- Lower energy consumption compared to the same 1Ph versions
- Continuous variable speed in both directions of rotation
- Compatible with GFCI systems (North America)

Technical Data:

Maximum torque & RPM

- 1200 Nm - 13 rpm @200V-240V
- 1100 Nm - 11 rpm @100V-130V
